

Our customer is market leader in the area of wireless and sensor products.

**Senior MEMS Test Engineer (m/w) – 10040nc**

Career Opportunity: Group Leader

**Location: Austria**

Your tasks and responsibilities:

- Software development and improvement for automatic MEMS (micro electro mechanical systems) test and calibration systems
- Reduction of manufacturing cost and increase of throughput by applying yield improvement and test time reduction projects
- Define strategies, develop new test methods and automated fixtures and coordinate software development for next generation of mechanical test equipment in close collaboration with MEMS system research teams.
- Support transfer of test solutions to SensorDynamics' external test facilities in Far East
- Remote coordination and supervision of external test facilities
- Work together with Sales team in order to align features and benefits offered by our products with the customer's future needs
- Execution of daily tasks, project milestones etc. in a timely manner ensuring high standard and quality

Qualifications:

- Experience with mechatronics systems or degree in related field.
- Experience in software development required.
- Experience of electronic engineering and physics advantageous.
- Experience with automated test equipment (e.g. Teradyne) especially in automotive area advantageous.
- Open minded for system level coherences.
- Very good communication skills in English required. Other languages such as German and Italian would be advantageous
